ODYSCAPE — Smart Travel Planner

Discover More. Wander Further.

CANDIDATE NAME
S Akhilesh

REGISTRATION NUMBER
25BCE5345

SELECTED TRACK
Track 1: Frontend Development

TECHNOLOGIES
React 18 • Vite 5 • Tailwind CSS • LocalStorage

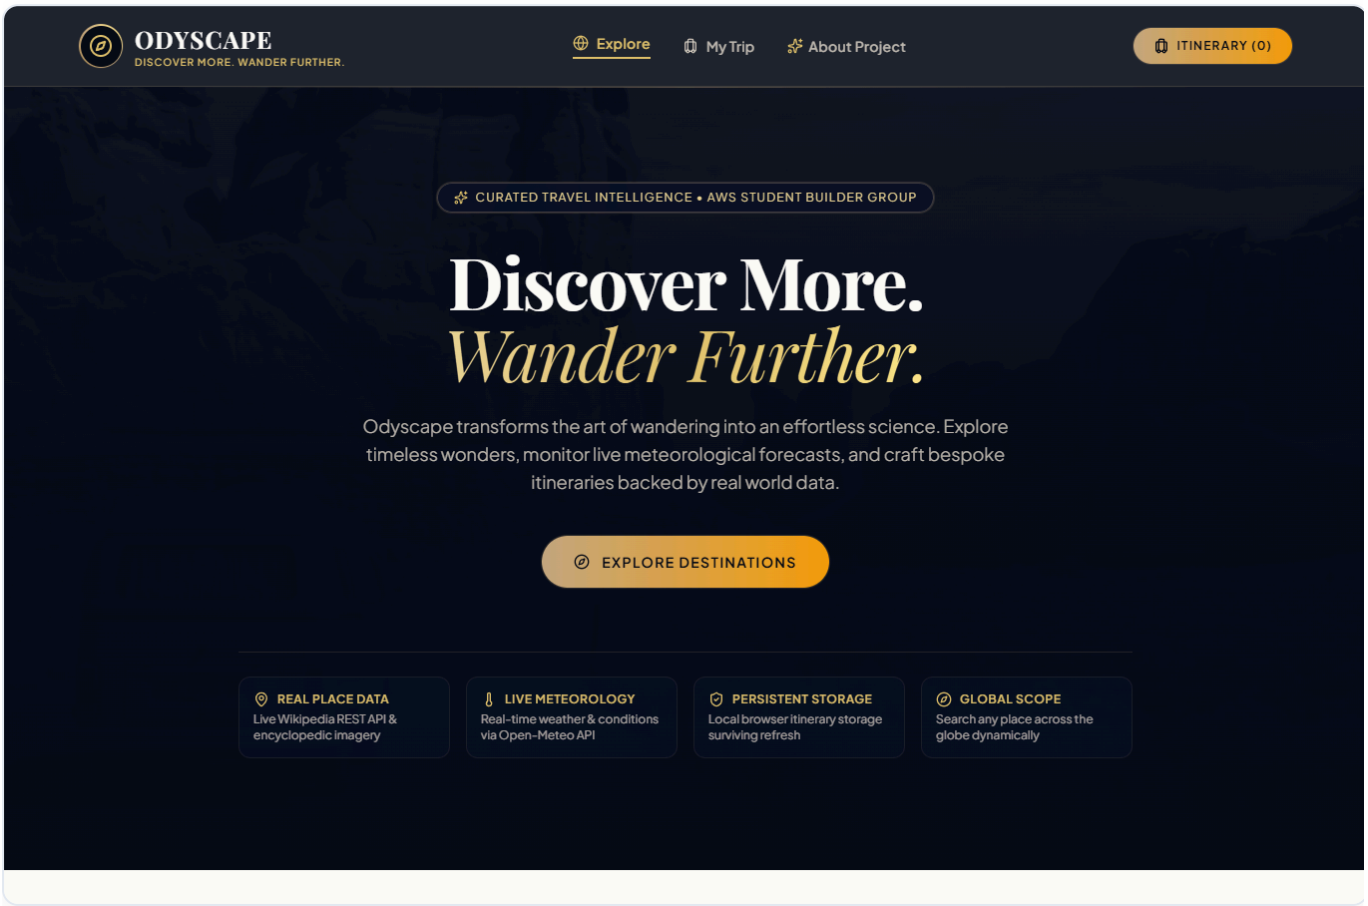

REAL EXTERNAL APIS
Open-Meteo Weather API • Wikipedia REST API

REPOSITORY
github.com/akhilesh012008/odyscape

1. Destination Exploration (Desktop View)

Mandatory Feature 1 & 11

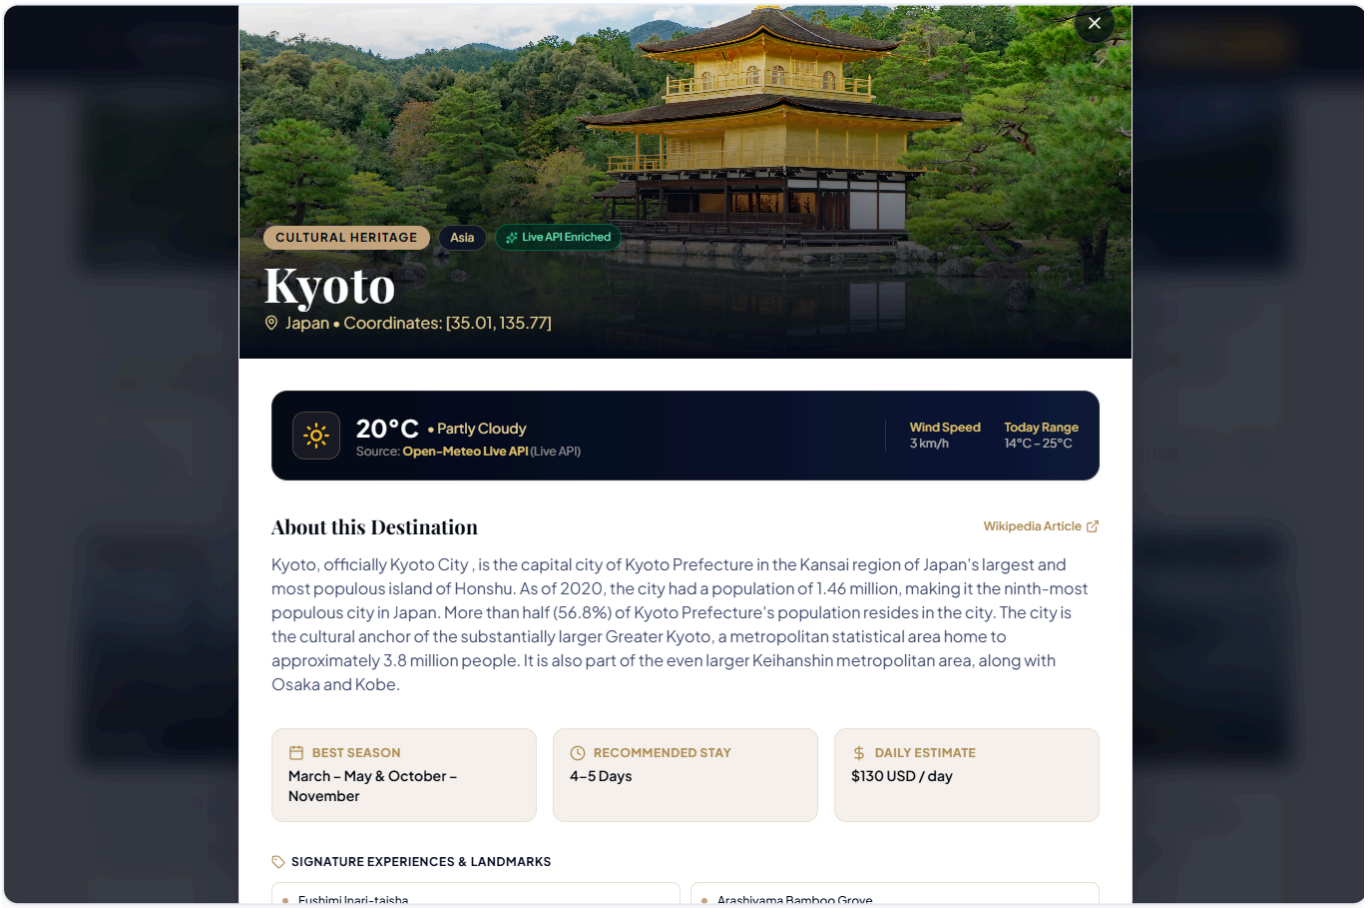

Interactive card layout rendering real encyclopedic destinations enriched with live atmospheric weather data from Open-Meteo and authentic imagery from the Wikipedia REST API.

2. Real-Time Destination Details & Meteorology Modal

Mandatory Feature 3 & 5

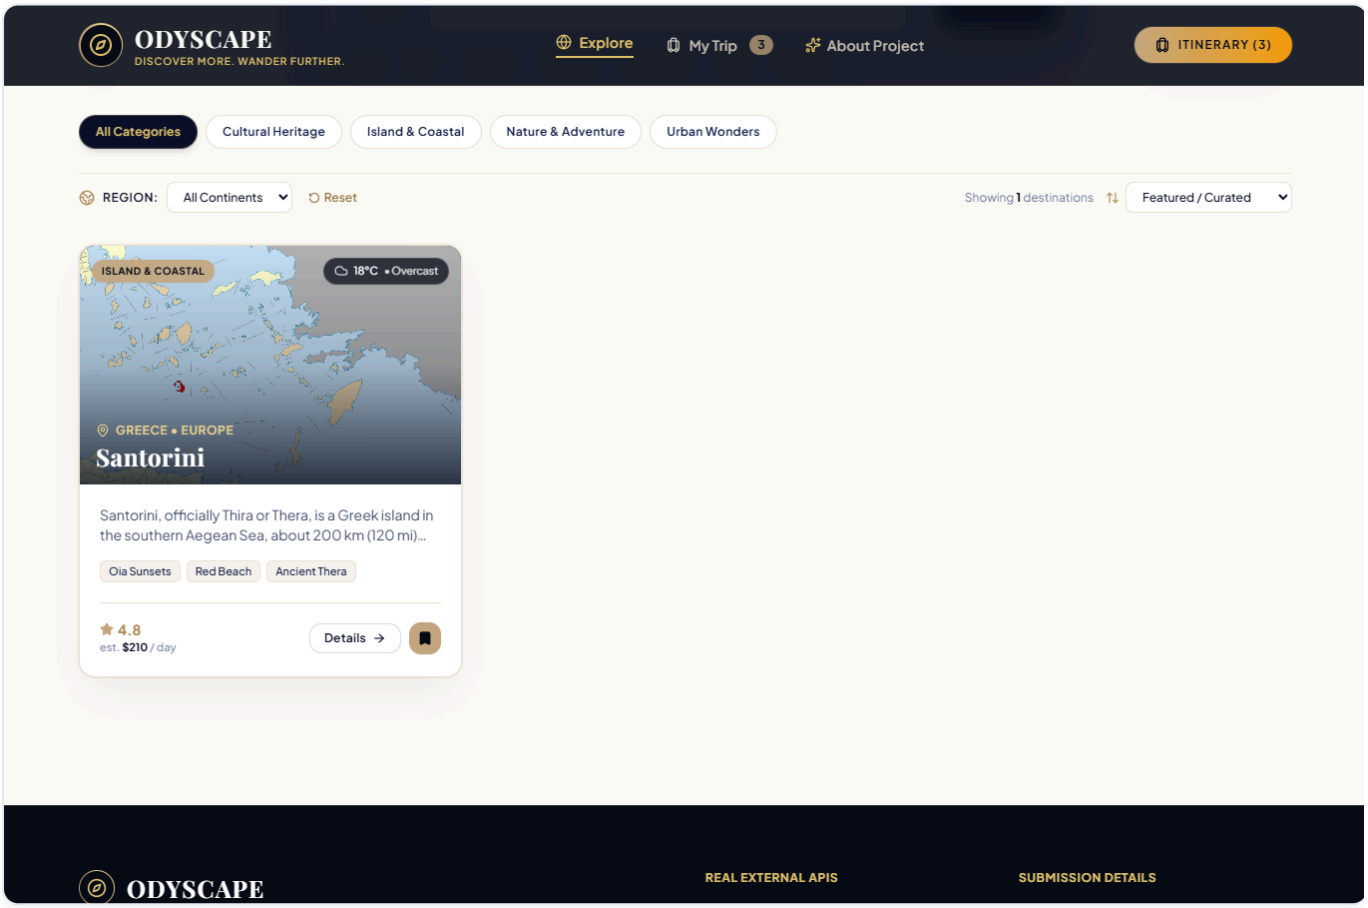

Detailed destination view displaying live temperature and weather conditions, WMO weather codes, wind speeds, Wikipedia extracts, visit recommendations, budget estimates, and personal itinerary planning controls.

3. Search, Categorical Filtering, and Real-Time Results

Mandatory Feature 2 & 4

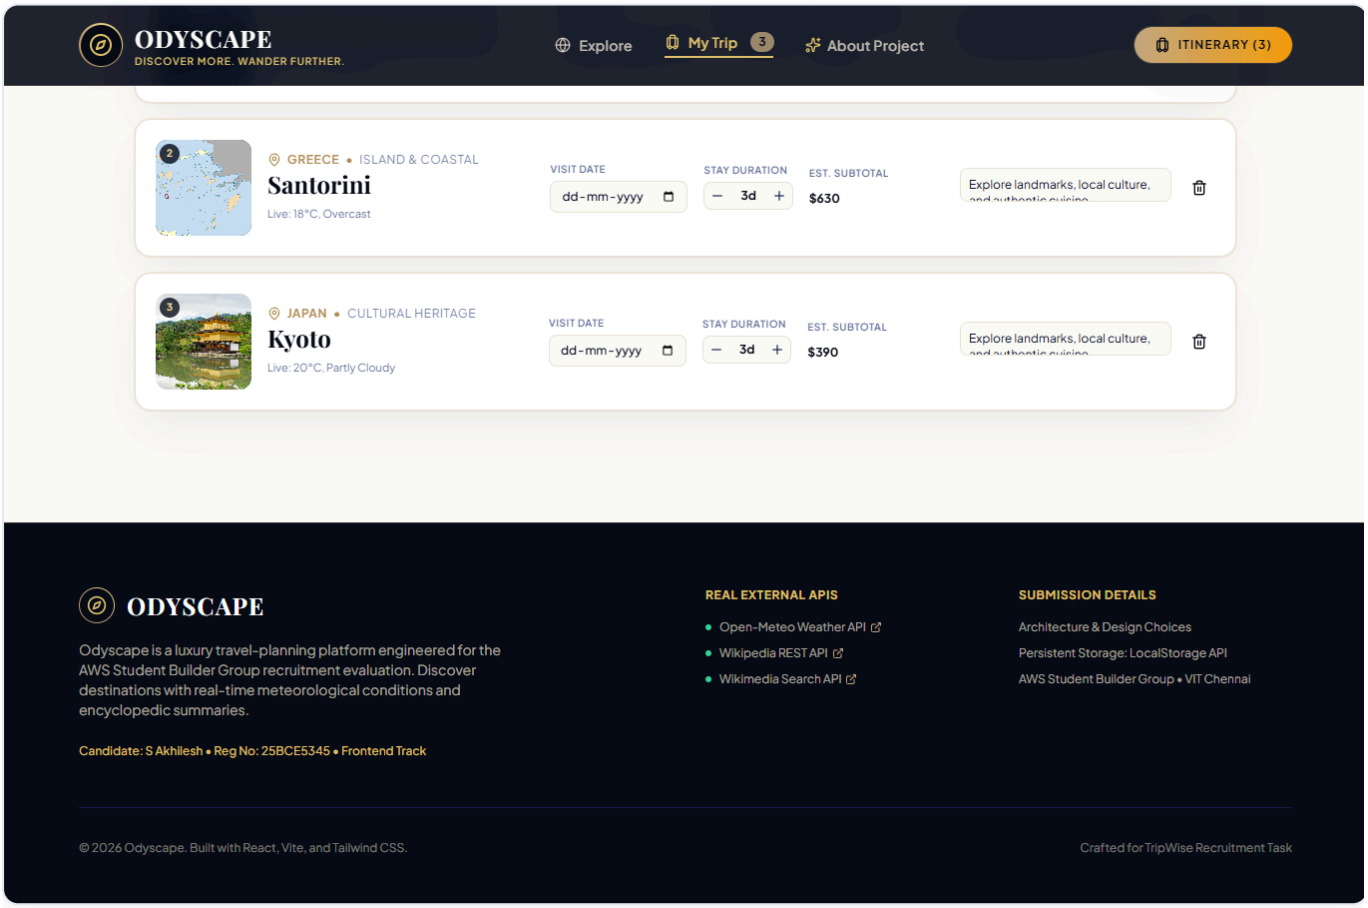

Instant search by destination, country, or tag, coupled with category filtering (Cultural Heritage, Island & Coastal, Nature & Adventure, Urban Wonders) and sorting options (featured, name, budget, rating).

4. My Trip Itinerary Planner (Populated & Persisted)

Mandatory Feature 6 & 7

Interactive personal itinerary with trip analytics (total days, estimated budget, unique countries), customizable stay lengths, visit dates, editable personal travel notes, JSON export, and print formatting. Persisted via localStorage.

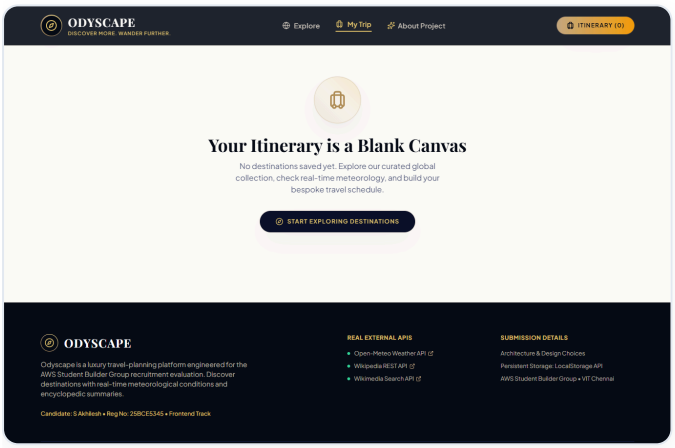

5. Empty States & Graceful Error Handling

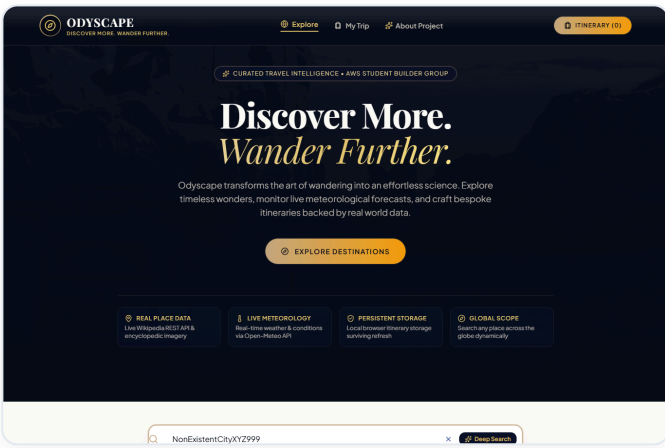

Mandatory Feature 8, 9 & 10

Thoughtful feedback states for empty itinerary and zero search results, complete with recovery actions like "Reset All Filters" and dynamic Wikipedia global exploration.

Empty Itinerary State:

Empty Search State:

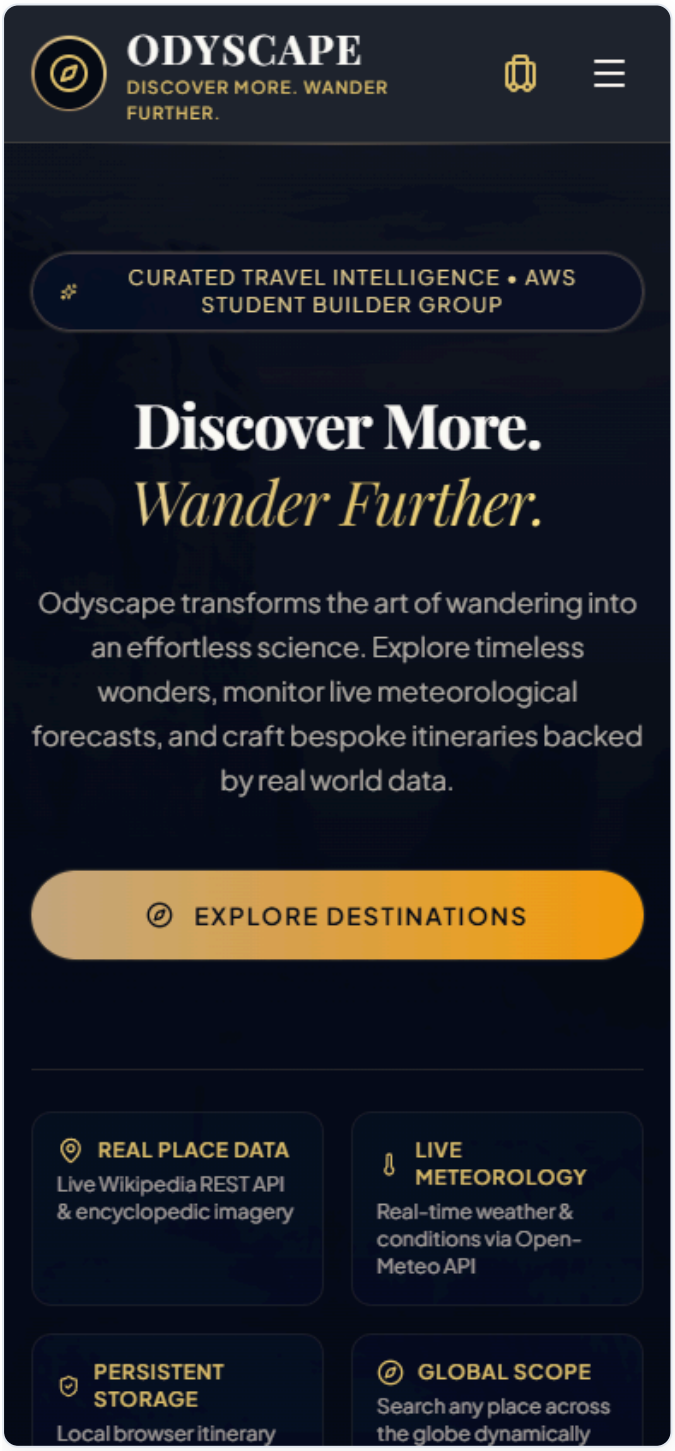

6. Responsive Mobile Experience (iPhone / Android)

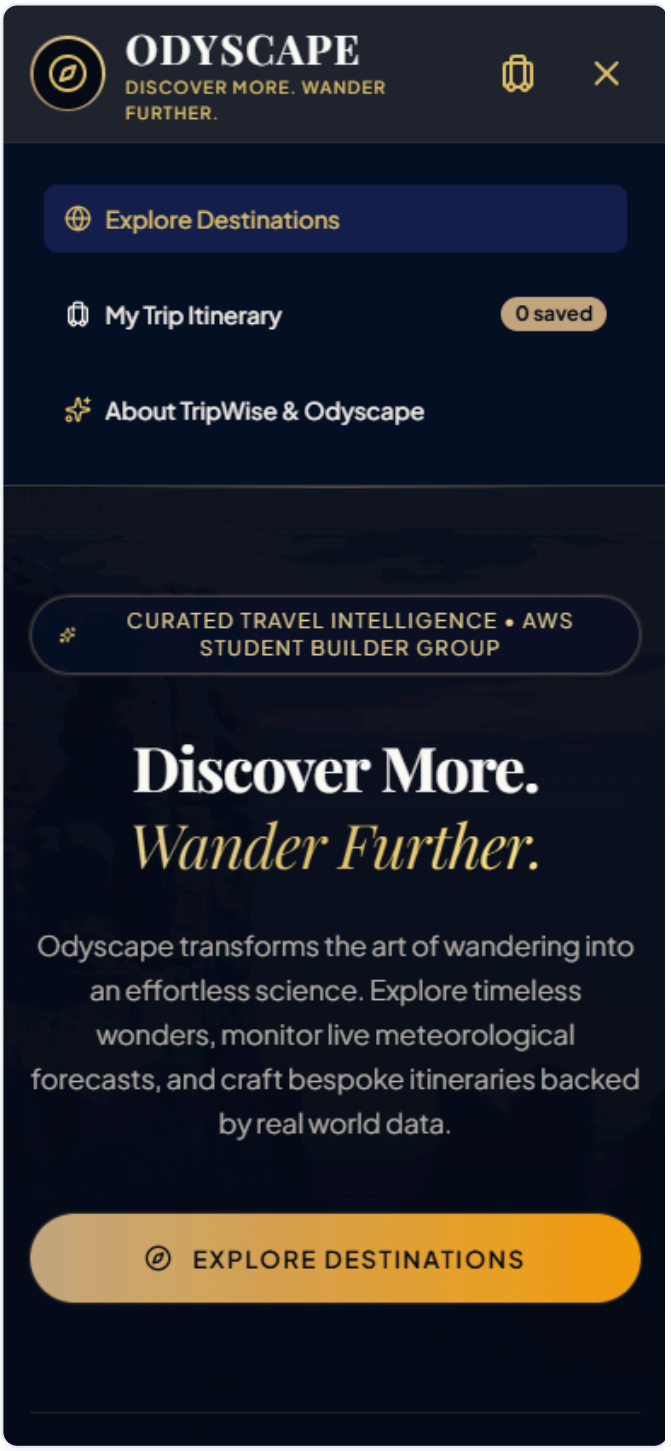

Mandatory Feature 11

Fully responsive mobile interface tested on modern viewport sizes (390 × 844) with mobile navigation drawer and touch-friendly controls.

Mobile Explore View:

Mobile Navigation Drawer:

7. Architecture, Track Details & Verification Modal

Technical Quality & Attribution

Candidate credentials, API attribution, and architectural choices embedded directly into the application.
